Globalsense Cash Flow Instability

Hey Team,

I wanted to flag a request from Globalsense and get your preliminary thoughts before we formalize anything.

Globalsense has run into some cash flow issues, and has asked to be let out of their contract to let some of the pressure out of their financial commitments. They will be transitioning into year 2 of their 2 year term on August 1st, so I'm hoping that we'll be able to honor the request given the length of the partnership with us, their willingness to collaborate on marketing initiatives, etc.

Some additional context around the ask, they had a few pilots of their technology not convert into sales recently, but with some promising pilots on the horizon in Latin America and Australia, along with a new feature that seems to be getting quite a bit of uptake, things are moving in the right direction.

They are really looking for a pause more than an outright cancellation, but I know this has not been looked favorably upon in the past, so I'm wondering what we can accommodate given the new reality and regime. They've stated their goal would be to come back to full enterprise status again in October/November.

I'd like to get your preliminary feedback so I can decide how to escalate, including whether we need to loop in Qualcomm leadership.

Are you open to a 3-4 month pause on Year 2 with a hard restart date, contingent upon fulfillment of their year 1 payables? Or is there some other way you would prefer to structure this?

Thanks,

P

I'm supportive of letting them out of year 2 as long as they pay up all year 1 amounts

If they decide to re-engage then we can consider it openly at that time.

I am fine with that approach as well, letting them out of year 2.

Unfortunate about situation. I'm aligned with our teams decision.
Best,
Spencer

OK, thanks team. I'll get the planning underway on my end. The other thing top of mind here is the IP.... Wrinkle. Their solution relies on audio models developed on Edge Impulse, the paper they are on dates back to July 2025, and its unclear to me if that means we need to draw the hard boundary "rip everything out since you're no longer licensed to use it" or is it the gentler stance, nothing can be used that was built post July 31st 2026 (new contract end date).

William, can you get with accounting and get me a total outstanding balance figure, please?

Confirming will follow up on outstanding balance

Also Confirming that everything needs to be ripped out within 30 days of termination (Except for their intermediate assets)

I believe its the data in the Org export - not sure if there is more to it (no SDK files should be included)

Ah gotcha, hadn't heard it branded as such, in this side of the house its a good old fashioned 'data deletion'.

At the risk of sounding like a broken record here; what are the actual reasons we're not interested in executing pauses? Is this about forecasting hygiene, admin overhead, something entirely out of my purview....? I would think we would want to keep the TCV intact, avoid the offboarding admin burden, make re-starting a higher probability, low-friction act, rather than re-onboarding, signing new paper, re-establishing all data assets on the platform, etc. Not to mention, it would be a goodwill measure for an organically successful customer whose worked shoulder to shoulder with us at imagine, done whitepapers, blog posts, webinars, etc.

Is there a way to execute this, with guardrails and an extended contract end date that would make this at all attractive?

A customer is only a customer if they are active and in compliance with all terms - suggesting that we could maintain their TCV doesn't correspond with them not being active and using the service (if on pause)

Thanks for the reply - though I need to flag that it doesn't quite engage the substance of what I raised.

Your point about "a customer is only a customer if active" is true by definition, but it's also circular. The real question isn't whether a paused account is "active" - it's whether a flexible, win-back-friendly posture serves us better than a hard cancel. On that, the costs of cancellation still stand unaddressed: double the admin (offboard + re-onboard), re-papering and rebuilding their data assets, and walking away from a customer who's been a genuine amplifier for us.

I'm not asking for this information to be personally indulged - I'm asking for the reasoning so I can execute this cleanly, in a way that satisfies whatever the real concern is (forecasting, compliance, rev-rec), that strikes a balance between upholding our business principles and doing right by a customer. If there's a constraint I can't see from where I sit, that's useful information. If the objection is something the guardrails I proposed don't already cover, tell me what's missing.

There's not a concept of pause in licensing that I'm aware of - if we are just trying to hold onto their data during the pause. That comes with a lot of questions regarding responsibility for holding their data / confidentiality / ?

Another lens to look at this is what are we actually getting from a pause? I don't see any significant benefits or give/gets -

I think you were thinking about a pause to provide leniency but we have a customer with financial troubles and no clear timeline to resolve it so the work to put in place a defined pause period would result in what for us?

When you say 'not a concept of pause in licensing' do you mean SaaS licensing in general, or specific to how OUR contracts are structured?

In my experience, it's a common practice in SaaS, and written about extensively, but maybe there are different implications now that IP is a large part of our world...?

<https://www.saastr.com/as-a-saas-company-do-you-allow-customers-to-pause-their-account/>

<https://scalemath.com/blog/should-you-let-customers-pause-their-saas-subscription>

<https://churnkey.co/blog/how-to-encourage-saas-customers-to-pause-their-subscriptions-instead-of-cancelling/>

<https://recurly.com/blog/why-pausing-a-subscription-can-be-a-powerful-retention-tactic/>

Can you please help me get a definitive yes/no to the question of whether a pause is possible, as well as if we are willing to extend one?

William, what is the risk/liability to extending a pause to them?

Then we can evaluate if the ROI is worth it.

Thanks!

there isn't a concept of a pause in our licensing model (there is no 'pause' to offer) - if we were to allow them to not pay while we continue to hold their customer data, personal data and their IP we taking liability/risk for holding their data for no compensation in return. that doesn't work
